- ◆ Domain Name Registration and DNS

WEB SYSTEMS DEVELOPER

Acuity Marketing Communications (Franklin, TN)
Years Employed (2007-present)

Works with the Acuity customer support team and clients utilizing or needing Acuity web-based business solutions to define and scope new functionality, system customizations and modifications; and to implement solutions based on approved scopes of work.

Manages technical development of web-based applications and systems through successful conclusion, meeting delivery timelines, and is responsible for final QA review of all deliverables. Trains clients how to use Acuity web-based products.

Works with the graphic design team to implement new web sites. Wireframes and creates interfaces for web-based applications such as Content Management Systems, Contact Management, Photo Galleries, Flash-based Slideshows, and other similar systems with focus on usability, accessibility, and web standards. Coordinates with web development team for necessary back-end functionality, creates front-

end HTML pages and other templates, develops and maintains CSS framework, and integrates JavaScript frameworks PERL, and PHP codes for websites.

WEB INTERFACE DESIGNER

TennesseeAnytime, NIC, Inc. (Nashville, TN)

Years Employed (2004-2006)

Responsible for creating the flow of eGovernment Web applications and designing and constructing the browser-based user interfaces for the applications. Works with the project manager and clients to develop the work flow of the application and creates HTML prototypes to demonstrate how the application should look and flow. Creates visually attractive interfaces based on principles of good design and usability. Ensures that text on application pages (HTML, XML, XHTML) or Java Server Pages (JSP) is consistent, free of grammatical errors, and adheres to application style guidelines. Constructs application pages using current Web languages and techniques and ensures that the pages conform to standards of accessibility (e.g. Section 508, W.C.A.G.), HTML validation, and browser compatibility. Ensures the proper functioning and accessibility of any scripting or programming languages used and resolves problematic programming/interface/appearance issues. Responsible for ensuring that the application pages are consistent, accurate and up-to-date. This includes ensuring that changes are made at all places where the problem occurs and integrating new interface techniques as they are appropriate and become available. Contributes to the general functioning and effectiveness of the portal by undertaking other activities, such as special projects not in daily routine, creating presentations, or developing specific-need Web features. Other duties included creating graphics for print (name tags, promotional post cards, business cards, logo branding).
